General information

In the figure below, we present a logical view about the relationship between the three basic services of the ehealth platform that are the WS Consent, the Therapeutic link WS, and the Therapeutic exclusion services. A Therapeutic link can be managed by the following end-users:

- Citizen: a patient, a parent of a patient, a mandatory

The API eHealth Therapeutic Exclusion provides five methods. It is noteworthy that in this use case only the Get therapeutic exclusion *method is used*.

```

GET /therapeuticExclusions/{patientSsin}
(getTherapeuticExclusion)
Gets a therapeutic exclusion

Path parameters
patientSsin (required)
Path Parameter – Id of the patient (SSIN). If no other param defined, retrieve all exclusions from the patient

Query parameters
hcPartySsin (optional)
Query Parameter – Id of the healthcare party (SSIN), will retrieve professionals
hcPartyNihii (optional)
Query Parameter – Id of the healthcare party (NIHII), will retrieve organizations like pharmacies, do not use for professionals

Return type
array[therapeuticExclusion]
Example data
Content-Type: application/json

[ {
  "patient" : {
    "idIdentifier" : "",
    "hcParty" : {
      "idIdentifier" : "",
      "firstName" : "firstName",
      "name" : "name",
      "qualificationCode" : "qualificationCode"
    }
  },
  "patient" : {
    "idIdentifier" : "",
    "hcParty" : {
      "idIdentifier" : "",
      "firstName" : "firstName",
      "name" : "name",
      "qualificationCode" : "qualificationCode"
    }
  }
}

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

• application/json

Responses
200 Success
400 Validation error

```

Basic flow
