

TS-001 (ATH-TS-05): Authentication using an eID

User story

- **As a user I want to login into the application (MAIN) with an eID So that the IAM session and the IDP session will be active**
- **As a user I want to login into the application (MAIN) with an eID So that I can benefit from the ehealth basic services**

Initial data/state:

- User with eid card
- The user has a PIN code
- Application loaded / driver loaded
- A global logout must be invoked before running the test

TS dependencies:

- None

Test Script ID	Test Actions				Assertion
TS-001	Seq	Actor	Action	Automatic/Manual	<p>When the test actions are performed the following assertions must be checked.</p> <p>MAIN application:</p> <ul style="list-style-type: none">• The user should be logged-in into the MAIN application. <p>CSAM</p> <ul style="list-style-type: none">• Once logged into the MAIN application CSAM web page should be closed. <p>eHealth endpoint:</p> <ul style="list-style-type: none">• The IAM session should be active• The IDP session should be active
	1	MAIN	starting an identification action	Automatic: could be automated but cannot be generic since the applications to test have all a different layout.	
	2	CSAM	authenticate himself/ herself with eid	Manual: the eid identification process need a manual action (connecting eid drive, inserting eid card, putting PIN code)	
	3	IDP	choose a profile/ mandate/ organization (any of them)	Difficult to automate since CSAM and MAIN are different applications
