TS-001 (ATH-TS-05): Authentication using an eID

User story

- **As a** user **I want to** login into the application (MAIN) with an eID **So that** the IAM session and the IDP session will be active
- *As a user **I want to** login into the application (MAIN) with an eID **So that** I can benefit from the ehealth basic services*

Initial data/state:

- User with eid card
- The user has a PIN code
- Application loaded / driver loaded
- A global logout must be invoked before running the test

TS dependencies:

- None

Test Script ID	Test Actions				Assertion
TS-001					When the test actions are performed the following assertions must be checked.
	Seq	**Actor**	**Action**	**Automatic/Manual**	MAIN application:
	1	MAIN	starting an identification action	Automatic: could be automated but cannot be generic since the applications to test have all a different layout.	- The user should be logged-in into the MAIN application.
	2	CSAM	authenticate himself/ herself with **eid**	Manual: the eid identification process need a manual action (connecting eid drive, inserting eid card, putting PIN code)	CSAM - Once logged into the MAIN application CSAM web page should be closed.
	3	IDP	choose a profile/ mandate/ organization (any of them)	Difficult to automate since CSAM and MAIN are different applications	eHealth endpoint: - The IAM session should be active - The IDP session should be active
