

# Security

The security section covers security aspects and risks related to personal data and software security in general. The application has been developed using known guidelines on secure app development and/or secure software development contained in OWASP ASVS (External Links#OWASP ASVS) and Mobile ASVS(External Links#Mobile ASVS).

In order to cover security aspects in your application you need to take into account the following aspects:

- Architecture
- Authentication
- Access Control
- Personal Identifiable Information
- Data Storage 1
- Software Development Lifecycle (SDLC)
