

Testing

The goal of interoperability testing is to prove that end-to-end functionality between two implementations is as required by the specification that is implemented. It ensures end-to-end service provision across two or more products from different vendors.

It is advised to get a thorough understanding of the interoperability testing facilities offered by the writer of the specification. Once this is identified, an own test plan should be defined containing the following aspects:

VERWIJZEN NAAR PRODUCT QUALITY TESTING!!!!
